# LNK-SL2 INDICATOR LIGHT FOR INFLATABLE LIFEJACKET

LNK-SL2 lifejacket lights are alkaline battery-powered emergency lights to be installed on all kinds of life jackets. When the lifejacket lights` water sensors contact water, they will be automatically activated and keep outputting the flashing white light more than 0.75cd light intensity during at least 26 hours (13 hours at -1℃), which can uninterruptedly indicate the survivor`s location to increase the success rate of rescue. They can be manually turned off and turned on if water sensors contact with water.
